Add to solve each problem. Show your work.

1. Evan has two books about Larry Dotter. If he buys four more, how many will he have?
2. Molly paints rocks. She's painted five for her sister and six for her dad. How many rocks has Molly painted?
3. Santiago went whale-watching. He saw seven blue whales and six gray whales. How many whales did he see?
4. A genie granted 10 wishes on Saturday and nine on Sunday. How many wishes did he grant in total?
5. Nico barked at nine people this morning. He barked at another eight people this afternoon! How many people has he barked at today?

Solution

Add within 20 - Set #1

Add to solve each problem. Show your work.

1. Evan has two books about Larry Dotter. If he buys four more, how many will he have?

$$2 + 4 = 6$$

Move two fingers toward four fingers to explain. If this question is missed, try "Add Within 10" exercises next.

2. Molly paints rocks. She's painted five for her sister and six for her dad. How many rocks has Molly painted?

$$5 + 6 = 11$$

Five + six is a basic addition fact to memorize, but you can point out that it's the same as $5 + 5 + 1$.

3. Santiago went whale-watching. He saw seven blue whales and six gray whales. How many whales did he see?

$$7 + 6 = 13$$

4. A genie granted 10 wishes on Saturday and nine on Sunday. How many wishes did he grant in total?

$$10 + 9 = 19$$

5. Nico barked at nine people this morning. He barked at another eight people this afternoon! How many people has he barked at today?

$$9 + 8 = 17$$

If this item is missed, you can point out that it's the same as $10 + 8 - 1$.
